Professional Project Report
Gamified Learning App UI/UX Design

Student: Sami Makrani

Technology: Figma, SVG, GitHub

Certificate

This project report titled **LearnQuest – Gamified Learning App UI/UX Design** is submitted as an academic UI/UX design project.

Acknowledgement

I sincerely thank my faculty, mentors, and peers for their support and guidance throughout this project.

Abstract

LearnQuest is a mobile learning application concept that uses gamification to improve engagement. Users earn XP, maintain streaks, unlock badges, complete challenges, and track progress.

Problem Statement

Many learners lose motivation due to repetitive interfaces. Gamification encourages consistent learning through rewards and progress visualization.

Objectives

Design a modern, intuitive mobile interface.

Increase learner motivation.

Provide progress tracking.

Reward achievements.

Improve user retention.

Existing System

Traditional learning platforms often have limited engagement mechanisms and minimal personalization.

Proposed System

The proposed application introduces dashboards, lesson tracking, daily challenges, achievements, profiles, and leaderboards with a unified visual design.

Software Requirements

Figma, GitHub, SVG support, Modern Web Browser.

Design Principles

Consistency, accessibility, hierarchy, whitespace, contrast, reusable components, responsive layouts.

Color Palette

Primary #6C63FF

Secondary #4F46E5

Accent #FBBF24

Success #22C55E

Background #F7F8FC

Typography

Headings: Poppins Bold

Body: Inter Regular

Buttons: Poppins SemiBold

Screen Descriptions

1. Splash/Login introduces branding.
2. Home Dashboard displays progress and recommendations.
3. Continue Lesson resumes learning.
4. Daily Challenge encourages daily activity.
5. Achievements displays badges.
6. Profile summarizes user statistics.
7. Leaderboard ranks learners.
8. Design System documents reusable UI components.

UI Components

Buttons, cards, progress bars, badges, avatars, navigation bar, reward cards, statistics cards.

Testing

Verified layout consistency, color contrast, navigation flow, and component reuse.

Advantages

Modern appearance, increased motivation, scalable design system, beginner-friendly interface.

Limitations

Prototype only; backend, authentication, and database are not implemented.

Future Scope

AI-powered recommendations, cloud synchronization, dark mode, certificates, multiplayer quizzes, notifications.

Conclusion

LearnQuest demonstrates how gamification can improve the learning experience while following modern UI/UX practices.
